

# Human

- 1st cyberspace
- Create the cyberspace as an extension of his own
- The most **flexible** element always steer the system

# Cybersecurity

- *“Over 75% of successful attacks are due to insider threats”*
- Successful Security Attacks Exploit Human
  - **Interests**
  - **Weaknesses**
  - **Error**

# Vulnerability

- Social Engineering
- Security Systems are too standardized (S.O.P.)
- Inadaptability

# Human Vulnerability in Cybersecurity

# What can we do about ?

- Act upon the human
- Profile him
- Find the equilibrium between flexibility and order
- Make the cyberspace flexible and responsive

Thank you.
